DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. Claims 6-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kahle. Kahle discloses all of the subject matter as set forth in the claims and is identical to the invention as broadly recited. Some of the claimed elements clearly disclosed by the reference are: a method and system for individually labeling a compact disk at the time digital information is recorded. In regard to claim 9, the examiner submits that Kahle inherently performs statistical comparative analysis in order for his invention to function. Further, Kahle inherently discloses a destructible label. Applicant's attention is directed to column five (5), lines 27-38. However Kahle lacks the disclosure of a base plate in cooperation with a pestle to apply the label to the

disk. It would have been an obvious matter of design choice to one having ordinary skill in the art at the time the invention was made to use a base plate and pestle arrangement, since applicant has not disclosed that the use of this combination solves any stated problem or is for any particular purpose. Webster's dictionary defines pestle as "*any of various devices for pounding, stamping or pressing*". Hence the examiner submits that it appears the invention would perform equally well with any known equivalent elements.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Willmon Fridie Jr. whose telephone number is 571-272-4476. The examiner can normally be reached on Monday thru Thursday 9-6pm.
